The adhesive film applicator has a housing (2), contg. a adhesive tape coiled on carrier, a reel winding the tape after the film has been stripped from it. An application tool deflects the tape and protrudes from the housing to expose the glued side of the tape.

A drive mechanism (7,8,9) with a slip clutch (10) is mounted between the coil and reel and acts on the latter to keep the tape taut continuously. The tool (6) is resiliently mounted and typically comprises an application strip fixed to a rectangular, resilient, intermediate component.
